

FRIOCELL® P

Laboratory Incubators with Forced Air Convection and Peltier Cooling

The high technical standard of the FRIOCELL® P series enables time- and space-accurate temperature control of samples. The unique cooling system, based on Peltier cell technology, offers an accurate and economical simulation of selected natural processes and reduces sample evaporation. They are applicable in the fields of pharmacy, biotechnology, botany, zoology, food industry, cosmetics, chemistry, etc. The instruments are designed for long-term storage of samples at a constant temperature. The devices are not designed for processes requiring frequent temperature changes.

Interior volume: 22, 55, 111, 222, 404,707
Temperature range: from 0.0 °C to 70 °C
Inner glass door
Inner chamber: stainless steel DIN 1.4301 (AISI 304)

The cooling system does not contain any refrigerant, so it does not contribute to the increase of greenhouse gases in the atmosphere.

The very low electric power consumption at the set temperature compared to compressor systems with maximum energy efficiency reduces CO2 production, and thus the Peltier cell system makes a significant contribution to the global fight against global warming of the planet. Very fine control interventions at the set temperature together with a newly developed airflow system in the chamber contribute to the excellent thermohomogeneity of this incubator, without vibration. Temperature deviations in the chamber are thus among the lowest.

Eco line

- Intuitive control
- Microprocessor control of the Fuzzy logic process
- Multilingual communication
- Audible and visual alarm
- LED indicator of device functionality
- LCD display 3 inches (7.6 cm)
- Transflective brilliant FSTN display, uses COG technology (it is backlit and uses the reflection of external light - higher intensity of external light increases the readability of the display)
- Adjustable display contrast depending on the location of the device
- Above-standard wide angle of view
- Large, remotely visible characters on the display
- Current temperature during program run increased for better readability
- Durable, membrane-like keyboard with a soft-touch surface
- Mechanical button response
- Backlit symbols integrated directly into the membrane keyboard
- Keypad lock against unauthorized access – adjustable by multi-press
- Real-time programming.
- 9 programs, 2 segments in each program, up to 99 cycles
- RS232 Interface and USB Device
- Ethernet (RJ 45) and USB Host (optional)

Note:

All technical data are valid in an empty chamber (without samples on trays) for the ambient temperature of 22 °C and the supply voltage of 230 V ± 10 %.

*) The trays can be filled up to approx. 50% of the area, if possible in such a way as to allow an even flow of air inside the chamber space.

***) For volumes 22, 55, 111 and 222, the operation temperature range of 21 °C below ambient temperature to 45 °C above ambient temperature is guaranteed.

****) For volumes 404 and 707, the operation temperature range of 14 °C below ambient temperature to 30 °C above ambient temperature is guaranteed.

For the same range of operating temperatures as for smaller devices, it is possible to additionally purchase enhanced cooling/heating, only for the volumes of 404 and 707.

*****) Enhanced cooling.
